# Towards precision medicine in preclinical Alzheimer's disease: Who should be treated when and with what?

Reisa Sperling, MD

Brigham and Women's Hospital  
Massachusetts General Hospital  
Harvard Medical School

# Disclosures and Funding

R. Sperling Consultant (over past 3 years, all below NIH guidelines of \$5k):

Abbvie, AC Immune, Acumen, Alector, Apellis, Biohaven, Bristol-Myers Squibb, Roche, Ionis, Janssen, Merck, Oligomerix, Prothena, Vaxxinity

Spouse (K. Johnson) Consultant to:

Bristol-Myers-Squibb, Janssen, Novartis, Merck, Prothena

Research funding from:

National Institute on Aging:

P01AG036694; R01AG095009

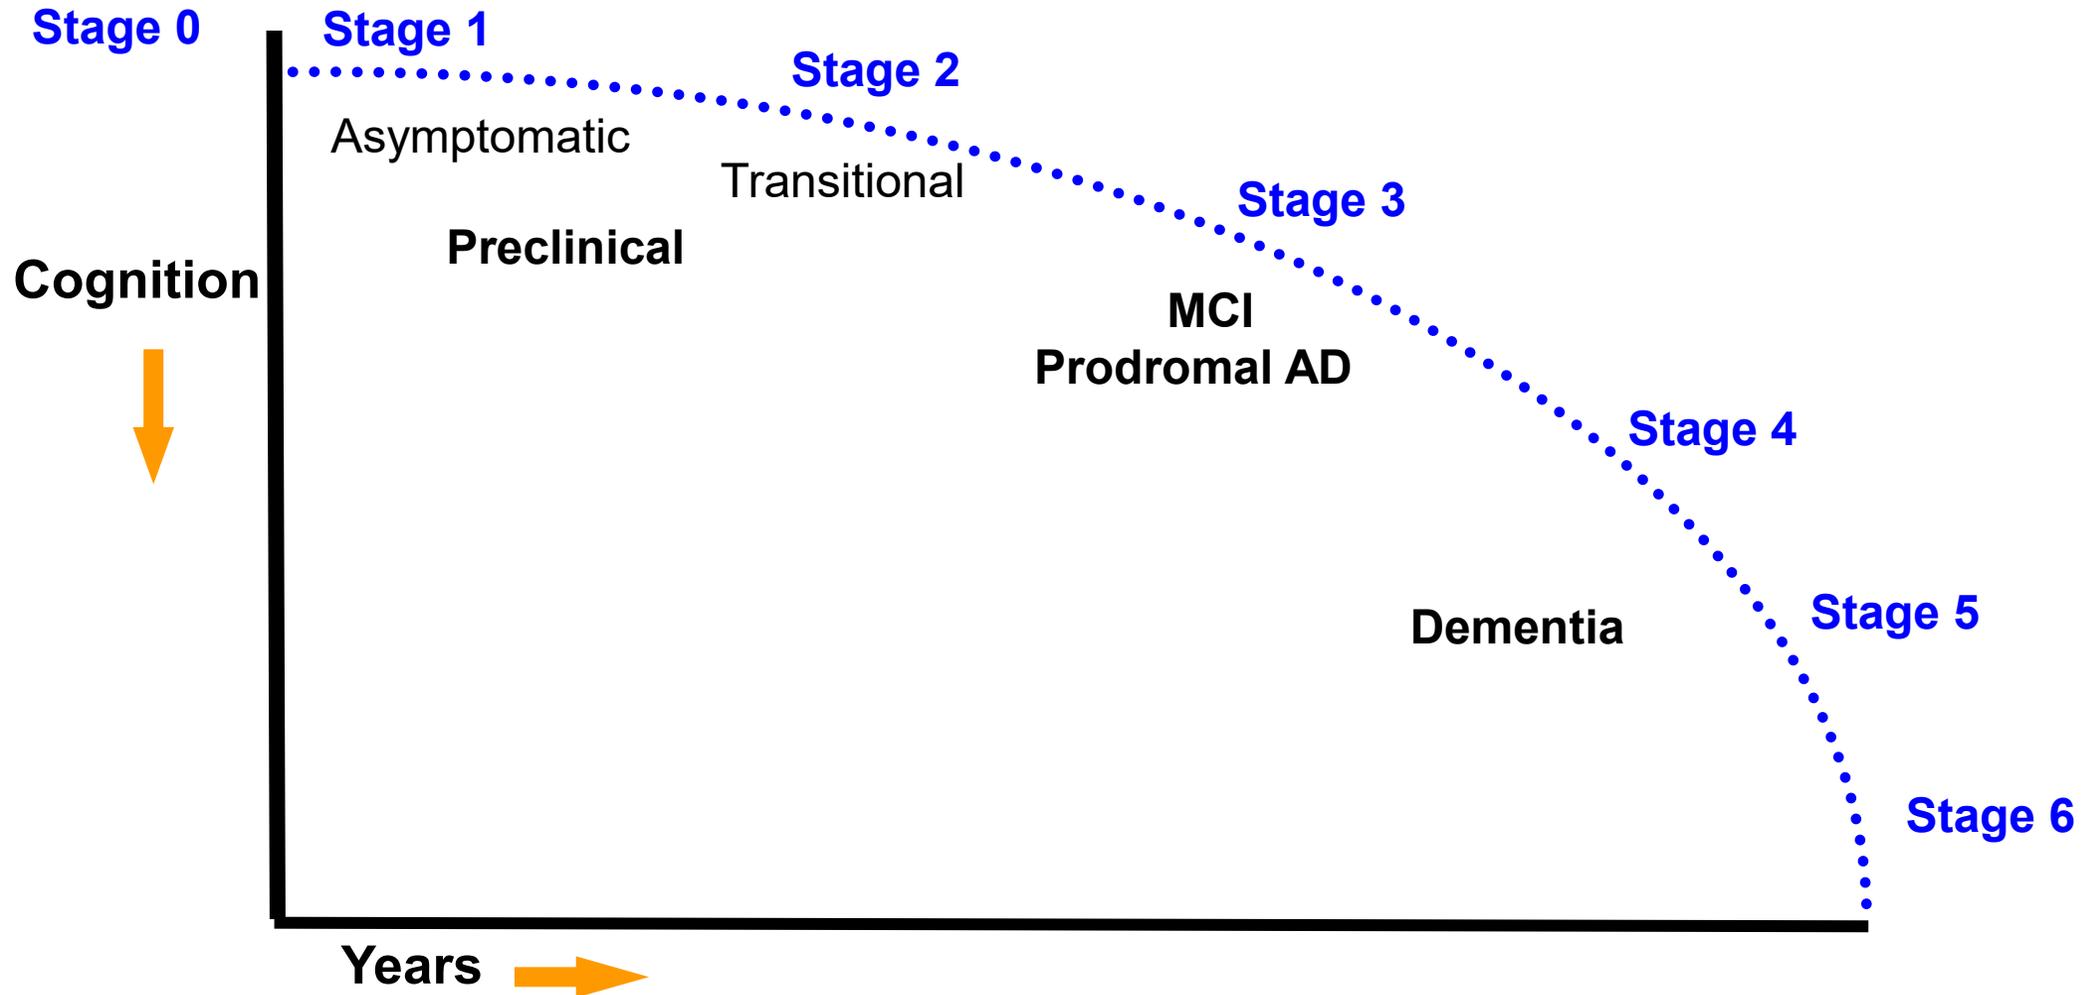

U24AG057437; R01AG063689

Alzheimer's Association

GHR Foundation, Fidelity Biosciences, Gates Ventures

Eli Lilly, Eisai – Public Private Partnership Trials Funding to Sites

# Summary and Remaining Challenges

- Convergent evidence that higher baseline amyloid and tau is predictive of faster decline and clinical progression
  - Biomarkers already used to select participants for prevention trials
- Still unexplained variance, heterogeneity in rates of decline
  - Need markers of neural reserve, vascular and metabolic processes
  - Need synaptic markers – are we making the brain work better?  
Digital cognitive testing may help
- More longitudinal data needed in clinical trials to model therapeutic response and time lags
  - Not clear that fluid (soluble forms) biomarkers are changing in parallel with imaging (aggregated forms) outcomes
