

# Oncology Provider's "Life"

# Oncology Provider's "Life"

# What do I want????

---

- ▶ All relevant data extracted from everywhere in EHR, missing little or none
  - from notes, pathology, radiology, imported PDFs, drugs, labs, etc
- ▶ Data displayed in the most “accessible” format – “machine – human interface” optimization
  - History, significant events, minimal “clutter” – a challenge with lengthy cancer course
  - Presented clearly, upfront, unobstructed by other irrelevant data
- ▶ Clinical “framing” of current state, with editability - ”cohorting”
- ▶ Guideline-concordant treatment suggestions, with links to order entry – customizable
  - Labs, radiology, treatment plans, consultations
- ▶ Assists in documentation – from above data extraction, entry of key clinical data elements in structured format – all designed to minimize documentation AND improve note clarity and focus
- ▶ Administrative tasks auto-managed in background – note distribution, coding, billing, pre-authorizations, etc
- ▶ Ability to auto-extract data on cohorts of pts, treatment choices, guideline concordance, etc

# What do I want????

- ▶ Ability to auto-extract data on cohorts of pts, treatment choices, guideline concordance, etc

**All must improve efficiency and quality of care**

**Must palpably improve the work of the clinician**

**Must minimize FRICTION!!**
